

**Supplementary Figure 3.** Effect of apabetalone treatment on OVCAR-5 cells. A. ABCA1 Western blot with increasing concentration of apabetalone (0-80 $\mu$ M). Protein extracts from OVCAR-5 (~30 $\mu$ g) were electrophoresed and immunoblotted with rabbit polyclonal ABCA1 antibody (1/1000, NB400-105, Novus Biological) and  $\beta$ -actin antibody (1/2000, Abcam) was used as a loading control. B. Quantitation of ABCA1 western blot. Data from 2-3 independent experiments. P <0.05, One-Way ANOVA. C. Effect of apabetalone on OVCAR-5 cell survival. Cells were treated with increasing concentrations of apabetalone (0-80 $\mu$ M). Data from mean triplicate determinations from 3 independent experiments. \* P<0.05, One way ANOVA.
