

Supplemental Figure 7. Gating strategy for T lymphocytes. T lymphocytes are identified by CD5 expression then subsetted into CD4⁺ and CD8⁺ T cells. Regulatory T lymphocytes are identified by intranuclear Foxp3 expression. Activation status of CD4⁺ and CD8⁺ is determined by expression of CD44, CD45RA, and CCR7 where CD44^{hi} CD45RA⁻ CCR7⁻ identify effector and effector memory T lymphocytes, CD44^{hi} CD45RA⁺ CCR7⁺ identify central memory T lymphocytes, and CD44^{lo} CD45RA⁺ CCR7⁺ identify naïve T lymphocytes.
