

## Supplementary Material

**Supplementary Figure 1.** Kaplan-Meier survival curves regarding (A) all-cause mortality and (B) all-cause mortality or admissions for heart failure in patients with dynamic severe MR and patients with severe MR already at rest. There was no difference in outcome regarding all-cause mortality ( $p=0.179$ ) and the combination of all-cause mortality or heart failure hospitalizations ( $p=0.190$ ) in patients with dynamic MR and in patients with severe MR already at rest. Abbreviations: HF=heart failure; MR=mitral regurgitation.
