Special Issue Introduction

Hair loss can have significant psycho-social manifestations. Although there are now several approved pharmacologic options to prevent hair loss, hair transplantation (HTS) is still the most effective method to treat hair loss. To date, HTS has a history of nearly 210 years, which involves the transplantation of hair, beard, eyebrows, eyelashes, and pubic hair; however, HTS is also a relatively tedious surgical procedure, involving the evaluation and design of the recipient site, selection of the donor area, the calculation of hair follicle (HF) number, separation and preservation of HFs, and the process of HF implantation.

Benefits

Open Access: the full-text of each published article can be accessed and downloaded from the journal website without any fee.

Rigorous Peer Review: we strictly follow international guidelines (COPE Ethical Guidelines for Peer Reviewers) and ensure rigorous peer review process.

Worldwide Readership: the readers of the journal are from more than 197 countries worldwide.

Wide Promotions: all published articles will be promoted on academic conferences, social networks for scientists or other various channels.
