Special Issue Introduction

Colorectal cancer (CRC) is a leading cause of cancer mortality worldwide. Although curative treatment options for advanced disease are still lacking, rapid progress has been made in the last decade in understanding the molecular mechanisms underlying CRC tumorigenesis and progression. Also, robust preventive measures and novel therapies resulted in decreased CRC incidence and improved survival. Reviews in this special issue will allow readers to gain insights into the current states of CRC prevention, detection, treatment and its unique molecular mechanisms.

Benefits

Open Access: the full-text of each published article can be accessed and downloaded from the journal website without any fee.

Rigorous Peer Review: we strictly follow international guidelines (COPE Ethical Guidelines for Peer Reviewers) and ensure rigorous peer review process.

Worldwide Readership: the readers of the journal are from more than 173 countries worldwide.

Wide Promotions: all published articles will be promoted on academic conferences, social networks for scientists or other various channels.
